

Copyright 1908 by Hart Schaffner & Marx

YOU probably have social engagements every week where dress clothes are needed, if not required---evening parties, dinners, "stags"; all sorts of places where "the proper thing" in clothes is highly important.

If the rest of the men are in full dress, or Tuxedo, and you're not, you know how you feel; you may be the best fellow there but you'll probably want to hide.

Two men in full dress in any gathering, can make forty other men in ordinary clothes feel cheap.

You ought to have the clothes for such occasions, if you haven't them already. And we'll show you Hart Schaffner & Marx dress clothes here, ready to wear, that are perfect in style and tailoring, and exact in fit.

We'll put you in right; at small cost. Evening suits \$42.50 to \$45; Tuxedos \$40 to \$42.50. We have all the dress accessories—fine shirts, neckwear, white and Tuxedo waistcoats, gloves, hosiery, silk hats. We'll outfit you in a few hours to make a good appearance at the most fashionable function ever heard of.

This store is the home of Hart Schaffner & Marx clothes.

DRILLING SQUARE HOLES

Buyers Index.

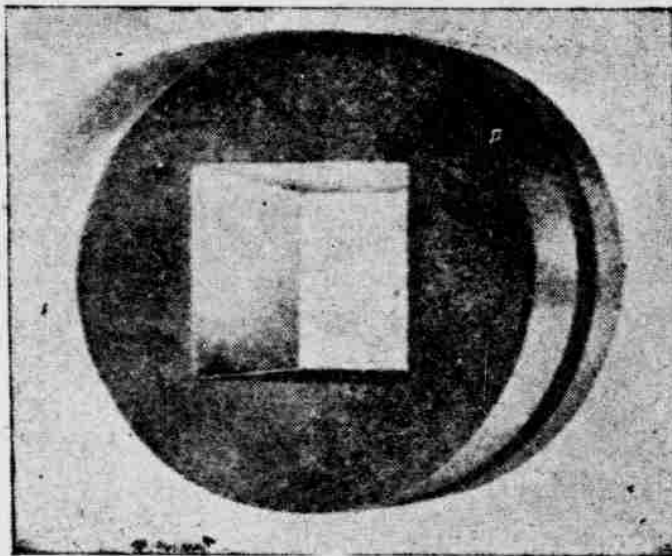

"RADICAL" ANGULAR DRILLING APPARATUS FOR BORING SQUARE HOLES IN IRON, STEEL OR OTHER HARD SUBSTANCES.

At Liberty Street, New York City, U. S. A., is being exhibited a new patented device for drilling square and angular holes in steel, iron, copper, brass or other metals, wood, stone, composition or any other material of a hard nature. The device works rapidly and can be applied to any ordinary drilling machine, lathe or drill press without requiring any change in these machines.

The basic principle on which the tool operates is a combination of a specially shaped drill which turns in an adjustable guide. Not only the edges of the drill are sharp but the face also, so that it is necessary to

have generally been obtained by drilling a round hole and afterwards angulating by hand work. Punching and slotting machines are also available for use in certain work, but all these methods are costly, and in many cases unsatisfactory, consequently engineers avoid the application of square or angular fittings to other than very special work by reason of cost, both in respect to labor and time. It is computed that the apparatus will drill 100 holes in the same time in which a skillful artisan can cut one hole only. This invention does not require skilled labor to operate it.

The importance of the use of square or angular holes in all classes of work can be readily recognized, as, in the majority of cases, especially where

WORK OF THE "RADICAL" ANGULAR DRILLING APPARATUS.

prime the work by first drilling a roundhole. The drill enters into the solid metal and can be stopped when the hole has reached any desired depth.

While the drill is revolving it continually changes its position, according to the center axis of the spindle on which the tool is attached, with the result that the cutting edges of the drill follow a course precisely coinciding with the form of the hole presented by the drill guide. Different sized holes can be obtained by simply changing the drill, the guide being adjustable. Holes having either perfectly sharp or rounded corners can be drilled at will. The method of working is more of a milling than a drilling process.

Hitherto square or angular holes

iron, steel and other metals are used, it has only been possible hitherto to drill an ordinary round hole, when the joints are generally riveted, but where constant strain is placed these run the danger of giving, while it is impossible for a square or angular fitting to give. By means of this apparatus square or angular holes can be used in work which was not before practical.

The apparatus is now being generally used throughout Europe in many of the leading manufacturing plants, and in the European army and navy departments.

"See, Fritz, we have been engaged now seven years." "Yes, dear; that means so many years less of married life."—Megendorfer Blaetter.

A THIEVES' OFFICIAL ORGAN.

The Bostatska Gazettar (Newspaper for the Barefooted), a weekly which made its appearance in Moscow a couple of months ago, was at first believed to be a humorous paper, and the authorities paid little attention to it. It is now apparent that it is the official organ of the Russian thieves. Every week accounts of the latest burglaries and thefts are given, and then follows an editorial chat in which mistakes that have led to discovery are criticized, and various points of technique discussed. Free advice is given in the correspondence column to thieves, and subscribers are strongly advised to avoid bloodshed whenever possible. So far the police have been baffled in their attempts to discover the publishers of this remarkable journal.

"Man," declared the old-fashioned preacher, "is a worm." "And," said a man who had been married three times and who was occupying a small space in a rear pew, "woman is the early bird."—Chicago Record-Herald.

When a man is good, he is apt to make a three ring circus of his goodness.

It's Going to Hum

And you will need a watch in good order to keep tab on the busy time ahead. I have a good, new stock of watches to select from and a good workman to keep your watch in order.
